RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 60 pages. Original publisher: Duluth, MN : U. S. Environmental Protection Agency, Office of Research and Development, Environmental Research Laboratory, 1992. OCLC Number: (OCoLC)472608873 Subject: Toxicity testing -- United States. Excerpt: . . . pH upon arrival. It is best to record data so that any air can be introduced. Also, contaminants can be preconceived ideas of the toxicants are avoided. Data leached from solid phase extraction (SPE) columns, records should include records of test organisms (spe-and methanol leaching off the column can cause bacte-cies, source, age, date of receipt, history and health), rial growth that will confound the results in the post-calibration records, test conditions, results of tests, and column blankand post C , , SPE column tests. Original-summaries of data. Once a control chart is developed ity and judgement are needed to devise tests that will using point estimates for reference toxicant tests, 1 out reveal artifactual toxicity (see Section 6) and some of of 20 reference toxicity test results will be predicted to these methods to deal with artifactual toxicity will be fall outside the acceptable limits if the 95 confidence effluent specific. intervals are used to develop the control chart (EPA, 2. 5 Health and Safety Issues 1991 C). If TIES are conducted during such a period, the TIE data generated must be used with caution, and For the toxicity identification work, hazards present the investigator must carefully examine the TIE data to in any effluent may not be known until Phase II identifi-determine if the results are usable. The decision may cation steps have been started. Therefore, safety re-be based on consistency of the concentration response quirements for working with effluents (or other samples)...
